

BOSCH
Invented for life

Ceramic low-voltage glow plug

For selectively supplying heat energy for the perfect ignition of injected fuel

Glow plugs with an extremely short heat-up time

**maximum
starting comfort**

due to an extremely short heat-up time

efficient

due to low power consumption

- ▶ The glow plug forms part of the glow system for diesel engines and is controlled by the glow control unit.
- ▶ Ceramic glow plugs offer maximum starting comfort and improve the cold running performance of the diesel engine. The glow plugs allow targeted post, interim and regeneration heating for maximum efficiency.
- ▶ The glow plug also operates reliably at maximum operating temperature and under the highest mechanical loads.
- ▶ In addition to ceramic glow plugs, Bosch also offers glow plugs with metal heating elements. Both selectively convert the supplied electrical energy into heat energy.
